CEROBOND 40

New Type Tack Coat For Road Works

DESCRIPTION:

Is a low viscosity solvent - containing cationic bitumen - emulsion modified with specially selected bonding additives.

ADVANTAGES:

Provides a better and more durable bond between an existing pavement and any bituminous course which is to be placed over it. Offers, compared to the traditional cutback tack coats, the following advantages:
- Shorter curing time.
- Easy homogeneous distribution of bonding layer.
- Stronger and durable bond.
- Can be applied on dry as well as wet surfaces.
- Non-flammable, does not require any special handling precautions.
- Economic because of lower rate of consumption.

TECHNICAL DATA:

<table>
<thead>
<tr>
<th>Base</th>
<th>Cationic Bitumen Emulsion</th>

DIRECTIONS FOR USE:

CEROBOND 40 is cold applied low viscosity liquid which can be easily applied by usual sprayers & should be uniformly distributed over the area.
- The substrate must be clean, dry (or slightly moist) and free of loose particles.
- Application should be avoided at temperatures lower than 5°C.
- CEROBOND 40 should be stirred before.

STORAGE:

6 months under suitable storage conditions.

PACKAGES:

200 kg. drums.
